

TRADE ANNOUNCEMENT – UAVE Limited and AVT Australia collaborate on UK first showcase of CM62 micro gimbal ISR day\night camera system.

UAVE and AVT are please to announce that World-Leading lightweight CM62 EO/IR surveillance camera system is to be showcased on the Prion Mk3 long flight endurance fixed wing UAV this spring. The CM62 and Prion Mk3 are complementary products. UK based flight trials will create evidential case study material to demonstrate the competence of both products brought together for the first time to deliver longer endurance missions.

The 260g CM62 is a new generation micro gimbal autosensing multi lens EO surveillance system bolstered by an integrated LWIR thermal camera. The miniaturisation achieved with the CM62 is providing a ground-breaking ISR solution delivering image quality and functionality only matched by much larger, now outdated, equipment. The CM62 reduced size weight and power (SWAP) complement the Prion Mk3 Light UAS and when combined displace in service larger end of life equipment. The Spring *invitation only* showcase leverages these two excellence driven COTS products reflecting the best of UK and Australian manufacturing. Designed, engineered and manufactured in the UK and Australia respectively the Prion Mk3 and CM62 are brought together for the first time to support the needs of defence and policing with an affordable UK\Australia supported product offering.

UAVE Limited is hosting the event at our manufacturing and flight operations base at West Wales Airport during the Spring and will come forward with proposed dates in due course. Confirm by email in confidence to register your interest in attending CM62\Prion Mk3 capability demonstration flights this Spring – email info@uave.co.uk to register your interest.
